ALL answers are verified if found any mistake then Correct ACCORDINGLY

Question No 1

In a JavaBean class, private values should be accessed through setters/getters.

True

Question No 2

In JSP scripting elements, it is NOT necessary that every opening tag also have a closing tag.

False

Question No 3

The correct way to declare a page as an error page in JSP is:

<%@page ... isErrorPage = "true"%>

Question No 4

A JavaBean class must have a zero argument constructor.

True

Question No 5

With Custom tags, it is possible for web page designers to use complex functionality without knowing any Java.

True

Question No 6

In context of JSP custom tags, a simple tag also has a body.

True

Question No 7

JSP directives are used to convey special processing information about the page to JSP container.

True

Question No 8

Is it true that Enterprise Applications need to support multiple types of users with multiple types of interfaces?

Yes

Question No 9

In the context of JSP expressions and scriptlets, pageDirective is NOT an implicit object.

False

Question No 10

Is it true that a JavaBean class can have any public instance variables/attributes?

No

AL-JUNAID INSTITUTE GROUP

Question No 11

An error JSP is called by the web server when an uncaught exception gets occurred.

True

Question No 12

In JSP scripting elements, it is NOT necessary that every opening tag also have a closing tag.

False

Question No 13

In a JavaBean class, private values should be accessed through setters/getters.

True

Question No: 14

The correct format of writing a declaration tag in JSP is;

<%! Java code %>

Question No 15

The correct way to define a JSP forward action element is:

<jsp:forward page = "one.jsp" />

Question No 16

JSP directives are used to convey special processing information about the page to JSP container.

True

Question No 17

In JSP, _____ is an implicit object, which belongs to ServletConfig class and represents the JSP configuration options.

Config

Question No 18

In context of JSP custom tags, is it true that a "Tag with Attributes" does NOT have a body?

False

Question No 19

A JavaBean class must have a zero argument constructor.

True

Question No 20

There is NO equivalent tag for comments while writing JSP scripting elements in XML.

True

Question No 21

HTML comments are _____ in browser and JSP comments are _____ in browser.

hidden, hidden

AL-JUNAID INSTITUTE GROUP

Question No 22

Which of the following is the correct format of writing an include directive in JSP?

<%@ include {attribute="val"} %>

Question No 23

The correct way to call an error page in JSP is:

%@page ... isErrorPage = "error.jsp"%

Question No 24

In JSP, _____ is an implicit object, which belongs to ServletConfig class and represents the JSP configuration options.

Config

Question No 25

In a JavaBean class, private values should be accessed through setters/getters.

True

Question No 26

Is it true that Enterprise Applications need to support multiple types of users with multiple types of interfaces?

Yes

Question No 27

An error JSP is called by the web server when an uncaught exception gets occurred.

True

Question No 28

Which of the following is the correct format of writing a page directive in JSP?

<%@ page {attribute="val"} %>

Question No 29

With Custom tags, it is possible for web page designers to use complex functionality without knowing any Java.

True

Question No 30

A JavaBean class must have a zero argument constructor.

True

Question No 31

JSP directives are used to convey special processing information about the page to JSP container.

True

Question No 32

In JSP scripting elements, it is NOT necessary that every opening tag also have a closing tag.

False

Question No 33

AL-JUNAID INSTITUTE GROUP

A JavaBean class must have a zero argument constructor.

True

Question No 34

The correct format of writing a declaration tag in JSP is;

`<%! Java code %>`

Question No 35

The correct way to define a JSP forward action element is:

`<jsp:forward page = "one.jsp" />`

Question No 36

A single page is doing everything that is really a best approach while making of web applications.

False

Question No 37

In context of JSP custom tags, a simple tag also has a body.

True

Question No 38

Which of the following is the correct format of writing a taglib directive in JSP?

`<%@ taglib {attribute="val"} %>`

Question No 39

In context of JSP custom tags, is it true that a "Tag with Body" must have one or more attributes?

True

Question No 40

By means of Page Directive, a JSP can be given the responsibility of an Error page.

True

Question No 41

Tag Library Descriptor (.tld) file is a simple text base document.

False

Question No 42

The correct way to call an error page in JSP is:

`%@page ... isErrorPage = "error.jsp"%`

Question No 43

Which of the following is the correct format of writing a page directive in JSP?

`<%@ page {attribute="val"} %>`

Question No 44

JSP forward action element is used to forward request to another resource.

True

Question No 45

JSP is a text based document capable of returning either static or dynamic content to a client's browser.

AL-JUNAID INSTITUTE GROUP

True

Question No 46

By means of Page Directive, a JSP can be given the responsibility of an Error page.

True

Question No 47

Is it true that a JavaBean class can have any public instance variables/attributes?

No

Question No 48

In JSP, _____ is an implicit object, which belongs to ServletConfig class and represents the JSP configuration options.

Config

Question No 49

Which of the following is the correct format of writing a taglib directive in JSP?

`<%@ taglib {attribute="val"} %>`

Question No 50

JSP directives are used to convey special processing information about the page to JSP container.

True

Question No: 51

The correct way to define a JSP include action element is:

- ► `<jsp:include page = "one.jsp"/>`
- ► `<jsp:include page @ "one.jsp"/>`
- ► `<jsp:include page # "one.jsp"/>`
- ► `<jsp:include page $ "one.jsp"/>`

Question No: 52

By means of Page Directive, a JSP can give the responsibility of an Error page.

► True

► False

Question No:53

In context of JSP custom tags, is it true that a "Tag with Attributes" does Not have a body?

► True

AL-JUNAID INSTITUTE GROUP

▶ False

Question No: 54

In JSP scripting elements, it is NOT necessary that every opening tag also have a closing tag.

▶ False

▶ True

Question No: 55

JSP forward action elements to forward request to another resource.

▶ True

▶ False

Question No: 56

HTML comments are _____ in browser and JSP comments are _____ in browser.

▶ shown. hidden

▶ shown. shown

▶ hidden. hidden

▶ hidden, shown

Question No: 57

The correct way to call an error page in JSP is:

▶ `<%@page ... errorPage = "error.jsp"%>`

▶ `<%@page ... isErrorPage = "error.jsp"%>`

▶ `<%@page ... setErrorPage = "error.jsp"%>`

▶ `<%@page ... getErrorPage = "error.jsp"%>`

Question No: 58

In context JSP custom tags, a simple tag has a body.

▶ False

AL-JUNAID INSTITUTE GROUP

► True

Question No: 59

A single page is doing everything is really a best approach while making of web application.

► False

► True

Question No: 60

An error JSP is called by the website server when an uncaught exception gets occurred.

► True

► False

Question No: 61

In a JavaBean class, private values should be accessed through setters/getters.

► True

► False

Question No: 62

In context JSP custom tags, is it true that a "Tag with Body" must have one or more attribute?

► False

► True

Question No: 63

The correct way to define a JSP forward action element is.

► `<jsp:forward page = "one.jsp"/`

► `<jsp:forward page @ "one.jsp"/`

► `<jsp:forward page # "one.jsp"/`

► `<jsp:forward page $ "one.jsp"/`

Question No: 64

A JavaBean class must have a zero argument constructor

AL-JUNAID INSTITUTE GROUP

▶ **True**

▶ False

Question No: 65

HTTP response code 401 indicates that _____ .

▶ **Indicates that access to the requested resource has been denied.**

- ▶ requested resource is available
- ▶ error by server
- ▶ request requires HTTP authentication

Question No: 66

The correct format of writing a declaration tag in JSP is;

▶ **<%!Java code %>**

- ▶ <%@Java code %>
- ▶ <%\$Java code %>
- ▶ <%#Java code %>

Question No: 67

The correct way to declare as an error page in JSP is:

▶ **<%@page ... isErrorPage = "true"%>**

- ▶ <%@page ... errorPage = "true"%>
- ▶ <%@page ... setErrorPage = "true"%>
- ▶ <%@page ... getErrorPage = "true"%>

Question No: 68

Is true that a JavaBean class CAN NOT be easily reused and composed together in an application?

▶ **No**

▶ Yes

AL-JUNAID INSTITUTE GROUP

Question No: 69

HTTP response code 401 indicates that _____ .

► Indicates that the request requires HTTP authentication

- requested resource is available
- error by server
- request requires HTTP authentication

Question No: 70

JSP directives are used to convey special processing information about the page to JSP container.

► True

► False

Question No: 71

Is it true that a JavaBean class can have any public instance variables/attributes?

► No

► Yes

Question No: 72

A single page is doing everything that is really a best approach while making of web applications.

► False

► True

Question No: 73

There is NO equivalent tag for comments while writing JSP scripting elements in XML.

► True

► False

AL-JUNAID INSTITUTE GROUP

Question No: 74

Which one of the following JavaBean's scope attribute has local value?

▶ **Page**

▶ Request

▶ Session

▶ Application

Question No: 75

Is it true that Enterprise Applications need to support multiple type of user with multiple types of interface?

▶ **Yes**

▶ No

Question No: 76

JSP is a text based document capable of returning either static or dynamic content to a client's browser.

▶ **True**

▶ False
