

Question No. 01

_____ is a process to start the computer or machine.

- A. **Booting**
- B. Scheduler
- C. Dispatcher
- D. All of the above

Booting

In **computing**, **booting** is the process of starting a computer. It can be initiated by hardware such as a button press, or by a software command. After it is switched on, a computer's central processing unit (CPU) has no software in its main memory, so some process must load software into memory before it can be executed.

2. Scheduler

Scheduler maintain the record each process is present in CPU and also main the process table Maintain Process Table (pID, pName, pTime, pPriority, pDuration).

3. Dispatcher

It is the components of kernel and oversees the processes execution. Dispatcher is used for:

- Time Sharing
- Multitasking
- Multiprogramming
- Time Slicing

Question No. 02

LAN is stand for what _____

- A. Locality Area Network
- B. Long Area Network
- C. Logical Area Network
- D. Local Area Network

1. PAN – Personal Area Network

A PAN is normally used for short- range communications typically less than a few meters.

2. LAN – Local Area Network

In contrast, a LAN normally consists of a collection of computers in a single building or building complex.

3. WAN – Wide Area Network

WAN links machines over a greater distance perhaps in neighboring cities or on opposite sides of the world.

4. MAN – Metropolitan Area Network

MAN is normally connection of computer in a same city.

Question No. 15

Copyright can be applied on:

- A. Dramatic Work
- B. Artistic Work
- C. Musical Work
- D. All of the above

☐ Patent

A patent is a legal monopoly lasting 20 years granted in exchange for describing an invention and paying fees to the Patent Office.

☐ Copyright

Copyright applies to literary and dramatic works, artistic and musical works, audio and video recordings, broadcasts and cable transmissions. Copyright is also the usual way of protecting software, although some software may be patented if it is a functional part of an invention. Copyright arises automatically – it does not need to be applied for – and lasts 70 years after the death of the author.

☐ Trademark

A trademark is a mark (logo) or other distinctive sign applied to or associated with products or services, which does not describe the products or services.

Question No. 12

_____ is programs that expressed the high-level primitives into machine-language programs.

- A. **Translator**
- B. **Compilers**
- C. **Interpreters**
- D. **Assemblers**

Translator

Translated is programs that expressed the high-level primitives into machine-language programs. There are two type of Translator:

Interpreters

Interpreters translates the program line by line meaning it reads one line of program and translates it, then it reads second line, translate it and so on.

Compiler

Compiler read the whole program and translates it into machine language completely.

Assemblers

Assemblers were developed to convert mnemonic expressions into machine language instructions.

Question No. 05

Which of the is type of Software Testing?

- A. Basis Path Testing
- B. Glass Box Testing
- C. Black Box Testing
- D. All of the above

Software Testing

- 1. Pareto Testing:** It uses the Pareto Principle (also known as the 80/20 rule) the idea that by doing 20% of the work you can generate 80% of the benefit of doing the entire job.
- 2. Basis Path Testing:** It is to develop a set of test data that insures that each instruction in the software is executed at least once.
- 3. Glass Box Testing:** In this test the software tester is aware of the interior structure of the software and uses this knowledge when designing the test.
- 4. Black Box Testing:** In this test the software tester is not aware of the interior structure of the software.
 - a. Boundary Testing
 - b. Beta Testing
 - c. Alpha Testing

Question No. 06

How many types of Software Engineering Documentation?

- A. 1
- B. 2
- C. 3
- D. 4

Software Engineering Documentation

1. User Documentation: The purpose of user documentation is to explain the features of the software and describe how to use them.

2. System Documentation: The purpose of system documentation is to describe the software's internal composition so that the software can be maintained later in its life cycle. A major component of system documentation is the source version of all the programs in the system.

3. Technical Documentation: The purpose of technical documentation is to describe how a software system should be installed and serviced (such as adjusting operating parameters, installing updates, and reporting problems back to the software's developer).

Question No. 06

Which of the following devices is used to connect two buses?

- A. Routers
- B. Bridges
- C. Gateways
- D. Repeater

Connecting LANs to other Networks

Bridge Is used to connect to two separate, but similar networks. But more complex than, a repeater.

Repeater it connects two buses, but it does not necessarily pass all messages across the connection.

A **Switch** is essentially a bridge with multiple connections, allowing it to connect several buses rather than just two.

Gateway Is used to connect two network using different protocols. The “point” at which one network is linked to an internet is often called a gateway because it serves as a passageway between the network and the outside world.

Question No. 01

_____ is a process to start the computer or machine.

- A. **Booting**
- B. Scheduler
- C. Dispatcher
- D. All of the above

Booting

In **computing**, **booting** is the process of starting a computer. It can be initiated by hardware such as a button press, or by a software command. After it is switched on, a computer's central processing unit (CPU) has no software in its main memory, so some process must load software into memory before it can be executed.

2. Scheduler

Scheduler maintain the record each process is present in CPU and also main the process table Maintain Process Table (pID, pName, pTime, pPriority, pDuration).

3. Dispatcher

It is the components of kernel and oversees the processes execution. Dispatcher is used for:

- Time Sharing
- Multitasking
- Multiprogramming
- Time Slicing

Question No. 45

A _____ is a mark (logo) or other distinctive sign applied to or associated with products or services, which does not describe the products or services.

- A. Patent
- B. Copyright
- C. Trademark
- D. Company Monogram

☐ Patent

A patent is a legal monopoly lasting 20 years granted in exchange for describing an invention and paying fees to the Patent Office.

☐ Copyright

Copyright applies to literary and dramatic works, artistic and musical works, audio and video recordings, broadcasts and cable transmissions. Copyright is also the usual way of protecting software, although some software may be patented if it is a functional part of an invention. Copyright arises automatically – it does not need to be applied for – and lasts 70 years after the death of the author.

☐ Trademark

A trademark is a mark (logo) or other distinctive sign applied to or associated with products or services, which does not describe the products or services.
